EDUCATION

Bachelor of Science in Computer Science – Cum Laude **Dec 2024**

Central Connecticut State University

WORK EXPERIENCE

Grey-box **Aug 2024 – Dec 2024**

Software Engineer Intern

- Built a responsive, mobile-friendly web app for translating medical terminology across multiple languages as part of a 3-person team; project won the department's senior showcase.
- Integrated the Gemini API as an AI-powered fallback for translations with no direct database match.
- Migrated the application to Next.js, TypeScript, and Tailwind CSS, improving maintainability and scalability.
- Collaborated in an Agile environment using Slack and Notion to coordinate sprints and streamline delivery.

Berlin Lions Club **Jan 2024 – May 2024**

Software Engineer Intern

- Unified the user and admin SQL schemas into a single table with consistent permission and field structures, creating one source of truth for user data and access control.
- Strengthened credential security by migrating stored passwords from MD5 to SHA-256 hashing via an incremental, zero-downtime rehash triggered on user login.
- Identified and resolved critical bugs, improving overall system reliability and user experience.

SKILLS

Programming Languages: Python, Java, C, JavaScript, GDScript
Styling & Markup Languages: HTML, CSS
Frameworks & Libraries: Next.js, Django, Tailwind CSS, Bootstrap
Databases & Cloud Services: SQL, Firebase, AWS
AI Tools: Gemini API, Cline (agentic AI coding assistant)
Version Control & Collaboration: Git, GitHub, Agile, Slack, Notion

PROJECTS

John Dungeon

- Led a 5-person team to design and build a top-down dungeon crawler in Godot Engine (GDScript) within a 3-week deadline; earned the highest rating (4.59/5) among competing teams.
- Designed and implemented enemy AI and combat systems using state-machine architecture, including a multi-phase boss encounter.
- Refactored codebase solo to modularize enemy AI, resolve major bugs, and improve combat fluidity; project remains in active development with additional features planned.
- Used Cline, an agentic AI coding tool, to accelerate feature development and debugging across the ongoing solo work.

TicketMaster Search Mobile

- Independently built a Kotlin-based Android app to search, browse, and save live events using the TicketMaster API.
- Integrated Firebase Authentication, supporting email/password and Google sign-in, with secure user-based data storage.
- Used Retrofit, Glide, and RecyclerView to optimize API communication, image loading, and event list rendering.
